Company profile:

HeidelbergCement Baustoffe für Geotechnik GmbH & Co. KG (HCG for short) is a subsidiary of HeidelbergCement AG. HCG produces and markets special building materials for a wide range of applications in the areas of mining and civil engineering.

With our in-house high-performing, applications-oriented product development and consultancy, we offer the ultimate competence in all matters relating to civil engineering and geotechnics. We offer a wide range of products for applications in landfill site redevelopment, redevelopments of previously-contaminated sites, roof supports in mines, cavity-filling, geothermics, horizontal drilling procedures and well sinking.

A further strength lies in our special building materials, developed and manufactured individually to satisfy client requirements.

Manufacturing- / delivery programme:

We can recommend the right products to you, for the widest range of applications.

- Backfilling and grouting

CableCem® is a heat-conducting special construction material developed as a filling material for jacket tube systems.

Powercrete® is a patented, ready-made concrete with a high thermal conductivity, which is used as a bedding material for high voltage cables.

- Diaphragm wall construction**
- Grouting**
- Anchorage and tunnel construction**

- Geothermics**
- Horizontal drilling**

- Soil treatment**
- Infrastructure construction**
- Pollutant immobilisation**

All products are offered bulk, in bags and in big bags. With a large number of site silos and our sophisticated logistics, we are able to supply even large quantities of building materials on time and round the clock.
