Company profile:

Since 1998 we offer expert service, research and development of innovative products for water quality assessment, monitoring and restoration in surface water (freshwater, marin), drinking water and waste water.

We participate in and lead projects in international cooperation with academia, industries and governments around the globe. Our worldwide unique, IP-protected LimCo BioSensor system (LBS) based on the established Multispecies Freshwater Biomonitor (MFB) continuously detects and monitors effects of mixtures of pollutants, thus allows to detect even unknown substances in due time before pollution irreversibly spreads in the environment or even harms human health.

Manufacturing- / delivery programme:

Expertise

Bioassessment, Ecotoxicological assessment, Bioanalytics, Online Biomonitoring

Products

Our new flexible modular biosensor system LBS based on long lasting experience with the Multispecies Freshwater Biomonitor (MFB) , unique and protected, helps you to rapidly detect pollution in your water...
