

## Bend rehabilitation packers

### Bend rehabilitation packers

- slide very well, do not kink at the inner pipe radius and, thus, allow for a reliable rehabilitation of pipe bends up to a curvature of 90°.
- are manufactured of high-quality materials which also allow for a rehabilitation of house connection outlet bends towards the main sewer system with observation of the free tail section.
- thanks to their small design can be easily removed from the rehabilitated pipe bend after use and after the air has been drained.
- are adapted in length to the stoneware, sewer and ductile iron pipe bends which exist in practice and allow for a rehabilitation across both sleeves in one working step.

**Usage range:** Rehabilitation of pipe bends up to 90° using suitable bend rehabilitation material such as, for instance, Brawoliner FIX.

Also for the rehabilitation of straight pipes of the indicated dimensions with traditional rehabilitation materials such as e. g. glass fiber mats or other rehabilitation liners.
