

## Surface box with Fugenring developed to prevent gap formation

Experience has taught us that road damage may occur when no proper joint is formed between surface box and tarmac road surface. The surface box with so called “Fugenring” offers the perfect solution to avoid this potential problem.

The new **4056V-FUG** and **4057V-FUG** surface boxes ensure a perfect installation in tarmac complying with German “ZTV Asphalt-StB 07” regulations. Firstly, the height adjustable feature offers great advantages. For example, during installation the top part of the surface box can be perfectly aligned with the road surface. In turn, the “Fugenring” feature helps avoiding cracks and gaps to emerge in the road surface surrounding the surface box.

G+W, in full: Gas- und Wasserarmaturen aus Kunststoff GmbH, is a dynamic and ambitious company which specializes in the sales of synthetic surface boxes and accessories. Since our company was founded in 2002 we can rely on the extensive knowledge and dedication of our employees.

We continually strive to develop ourselves, which has led us to valuable expansions of our product range and successful installations into the gas- and water distribution network over the years.

High quality, practicality and customer satisfaction is where G+W stands for. Besides our own quality checks most of our products are also tested and approved by the DVGW. All our product certificates can be found on the [Certificates](#) page.
