

Mobildeich Flood Protection

Mobildeich is a tube dyke which is filled with water. It is robust and durable, and it consists of a unique 3-Component-Safety System.

The **Mobildeich** consists of individual dyke elements that are available in different sizes and lengths. You can use the modules in any combination with each other and connect them to a stable chain of dykes.

Mobildeich works on all of these grounds: gravel, sand, paving stones, asphalt and concrete, grass.

Along with the applications on dry surfaces, the **Mobildeich** offers the advantage that it can even be set-up in flowing water.

If you have any questions, please do not hesitate to contact us.

The company is the inventor of the dikes, that can be quickly set up in case of need and also quickly removed. Mobildeich offers safe and efficient flood protection in three areas of application: floodwater protection, draining of construction sites and industrial water management.

The Mobildeich-System convinced at full practical use the experts from the specialist departments of insurances, firefighters and flood protection headquarters. Its high resistance against vandalism or flotsam has already being successfully demonstrated.
