### **Company profile:**

The constantly rising water levels of rivers, lakes and streams pose an increasing threat of floods every year. The annual cost of flood damage is hundreds of millions. The AQUARIWA Flood Protection System has been developed to enable a faster response.

We offer the flood system with guaranteed minimum protection heights of 100 cm, 80cm and 50 cm. When correctly assembled, a higher protection height than the guaranteed minimum can be obtained.

### **Products and services:**

All the necessary requirements of the response teams are combined into one protection system:

- Rapid deployment on site
- Simple operation on site
- Fast assembly, without tools,  
simple for anyone to use
- Fast disassembly with no debris or remains
- No disposal costs, as the system is re-usable
- Low storage space requirements
- Wide range of applications  
beyond flood protection
- Durable fibre glass cylinders
