

Equipment for the production of pure H₂O for drinking water from sea, river and brackish water using solar energy.

The principle:

The sun makes the H₂O evaporate, it condenses, is collected and purified. Without an engine and without emissions.

Solar water is pure H₂O, low in minerals, free from bacteria and therefore versatile.

If you have any questions, please do not hesitate to contact us.

Solarwasser deals with the problem of supplying a family with the daily requirement of drinking water from contaminated or salt water. A spring in your own garden – so to speak.

Evaporation and condensation are natural. It is essential to concentrate the process in such a way that within 24 hours a substantial amount of solar water is yielded using the sun's energy.
