Company profile:

faktor technik is a specialized contractor as per Art. 19 I of the German Water Management Act (WHG). Plastic materials are processed as per the guidelines of DSV (German Fasteners Association). The manufacturing process is controlled by TÜV.

Since the company's establishment in 1997 **faktor technik** manufactures fully-equipped plant units, containers, piping for chemical materials of all kinds and individually designed components

The company will also provide competent advice, delivery and assembly of rainwater utilization systems. They are experts for rainwater usage, drainage and retention, whether it is for the family home or for large commercial users.

Planning, design and manufacturing according to specific customer requirements can also be carried out on site, if necessary.

Scope of Services and Delivery Programme:

- Pipes and pipe systems made of plastic
- Plant equipment, plants, stirring devices and special components
- Built-to-suit solutions for industrial plant construction
- Linings
- Storage containers and retention trays made of plastic material
- Containers and trays can also be manufactured on site
- Cooling water containers, receiver tanks
- Water tanks to be fitted into vehicles, transport containers for special vehicles
- Processing of plastic materials

Thanks to their modern machinery equipment faktor technik can process thermoplastic materials such as polyethylene (PE), polypropylene (PE) and polyvinyl chloride (PVC).

All common plastic joining technologies such as hot gas extrusion welding, mirror welding and other welding processes can be applied.
